

# Science Fair Project

## Spring Term 1

This half-term the children are being asked to complete a science project of their own choosing and at an age appropriate level. Once more, we request that the pupils are guided and encouraged to complete these projects as independently as possible.

They can present their investigation in any way, shape or form, but it must be something which can support them to explain the science that is taking place themselves, such as a working model or live experiment. It might be that they get to answer a scientific question or prove or disprove something scientific.

Once all investigations are entered from each class, we are going to open up the school to parents and allow them to tour classes to see the different entries. Our expectation is that pupils will be ready to explain and model the science that they are investigating to our visitors.

First, second and third place rosettes will be awarded to the top three projects on offer.

*(All projects **must** be safe and suitable for primary aged pupils.)*

**Deadline for completed projects is Wednesday 7th February 2018**

**Science Fair takes place on Thursday 8th February 2018 at 2:15PM**

**So get investigating Professors!**
